1. Release Notes

This document provides the new features, installation and upgrade notes, known issues, and workarounds that apply to release 26.3 of OpenText™ Fortify Remediation Aviator .

This information is not available elsewhere in the product documentation. The user guides for this product are available on the Product Documentation website:

<https://www.microfocus.com/documentation/fortify-static-code-analyzer-and-tools/>

1.1. Fortify product name changes

OpenText is in the process of changing the following product names:

Previous name	New name
OpenText™ Static Application Security Testing (OpenText SAST)	OpenText™ Fortify Static Application Security Testing (OpenText Fortify SAST)
Fortify Software Security Center	OpenText™ Application Security
Fortify WebInspect	OpenText™ Dynamic Application Security Testing (OpenText DAST)
OpenText™ Core Application Security	OpenText™ Fortify on Demand
OpenText™ Core Software Composition Analysis (OpenText Core SCA)	OpenText™ Fortify Software Composition Analysis (OpenText Fortify SCA)
OpenText™ Application Security Aviator	OpenText™ Fortify Remediation Aviator
Fortify Applications and Tools	OpenText™ Application Security Tools

The product names have changed on product splash pages, mastheads, login pages, and other places where the product is identified. The name changes are intended to clarify product functionality and to better align the Fortify Software products with OpenText. In some cases, such as on the documentation title page, the old name might temporarily be included in parenthesis. You can expect to see more changes in future product releases.

1.2. New features

New features/updates

- OpenText™ Application Security Aviator for Vulnerability Remediation has now been renamed to OpenText™ Fortify Remediation Aviator.
- OpenText™ Fortify Remediation Aviator now supports SAST–DAST correlation, which uses AI to identify when OpenText™ Fortify Static Application Security Testing (OpenText Fortify SAST) and OpenText™ Dynamic Application Security Testing (OpenText DAST) findings from the same application refer to the same underlying vulnerability. Correlated pairs are visible in OpenText™ Application Security, giving security teams cross-validated evidence for each vulnerability. SAST-DAST correlation is now available for off-cloud setup and Hosted model. Support for OpenText Fortify on Demand will be available in future release.
- Support for multi-entitlement OpenText Fortify Remediation Aviator applications, allowing a single application to consume multiple entitlements and scale quotas proportionally.
- Support to define suppression exclusions in the tag mapping file and prevent OpenText™ Fortify Remediation Aviator from automatically suppressing specific vulnerability categories.
- New commands to manage SAST and DAST entitlements.

Installation and upgrade notes

- fcli v3.23.0 or later
